AMENDMENTS TO THE CLAIMS

- 1. (Previously Presented) A composition for performing a first assay at a first assay location, and a second assay at a second assay location, comprising:
 - a) a substrate with a surface comprising first and second assay locations separated from each other by a partition, wherein said assay locations have discrete sites configured to hold a single microsphere, said sites separated by a distance of less than 50 µm; and wherein said substrate comprises the dimensions of a microscope slide;
 - b) a population of microspheres comprising at least a first and a second subpopulation, wherein said first subpopulation comprises a first bioactive agent and said second subpopulation comprises a second bioactive agent, wherein said microspheres are randomly distributed at said discrete sites on said surface; and
 - c) a lid in communication with said partition, wherein a first hybridization chamber is formed at said first assay location, and a second hybridization chamber is formed at said second assay location.
- (Previously Presented) The composition according to claim 1, wherein said sites
 are separated by a distance of less than 25 μm.
- 3. (Previously Presented) The composition according to claim 1, wherein said sites are separated by a distance of less than 15 μm.
- 4. (Previously Presented) The composition according to claim 1, 2 or 3, wherein said sites are separated by a distance of at least about 5 μm .
 - (Canceled).
- (Previously presented) The composition according to claim 1, wherein the distance between centers of a first and second microsphere of said first subpopulation is at least 5 μm.
- (Previously Presented) The composition according to claim 6, wherein the distance between said first and second microsphere of saic. first subpopulation is less than about 100 μm.
 - 8. (Canceled)
 - 9. (Canceled)

Appl. No. Filed: 09/782,588

- 10. (Previously Presented) The composition according to claim 7, wherein the distance between a first and second microsphere of said first subpopulation is less than about 50 µm.
- 11. (Previously Presented) The composition according to claim 7, wherein the distance between a first and second microsphere of said first subpopulation is less than about 15 μm.
- 12. (Previously Presented) The composition according to claim 7, 10 or 11, wherein the distance between said first and second microsphere of ε aid first subpopulation is at least about 5 μm.

Claims 13-17 (Canceled).

- 18. (Previously Presented) A method for making a composition for performing a first assay at a first assay location, and a second assay at a second assay location comprising:
 - a) providing a substrate with a surface comprising first and second assay locations separated from each other by a partition, wherein said assay locations have discrete sites configured to hold a single microsphere, said sites separated by a distance of less than 50 µm, and wherein said substrate comprises the dimensions of a microscope slide;
 - b) randomly distributing a population of microspheres comprising at least a first and a second subpopulation at said discrete sites, wherein said first subpopulation comprises a first bioactive agent and said second subpopulation comprises a second bioactive agent; and
 - c) placing a lid in communication with said partition, wherein a first hybridization chamber is formed at first assay location, and a second hybridization chamber is formed at said second assay location.
- (Previously Presented) The method according to claim 18, wherein said discrete sites are separated by a distance of less than 25 μm.
- 20. (Previously Presented) The method according to claim 18, wherein said discrete sites are separated by a distance of less than 15 μm .
- 21. (Previously presented) The method according to claim 18, wherein the ratio of said first and said second subpopulation is at least 1:36.
- 22. (Previously presented) The method according to claim 18, wherein the ratio of said first and said second subpopulation is at least 1:100.

Appl. No. Filed: 09/782,588

February 12, 2001

- 23. (Previously presented) The method according to claim 18, wherein the distance between the centers of a first and second microsphere of sa d first subpopulation is at least 5 µm.
- 24. (Previously presented) The method according to claim 18, wherein the distance between the centers of a first and second microsphere of sa d first subpopulation is at least 15 μm.
- 25. (Previously presented) The method according to claim 18, wherein the distance between a first and second microsphere of said first subportulation is at least 50 μm.
 - 26. (Canceled)
- 27. (Previously presented) The method according to claim 18, wherein said discrete sites are wells.
- 28. (Currently Amended) A composition for performing a plurality of assays on a substrate, comprising:
 - a) a substrate having a surface comprising a first assay location comprising a first population of microspheres and a second assay location comprising a second population of microspheres, wherein said microspheres are ocated in discrete sites configured to hold a single microsphere;
 - b) a partition separating said first assay location from said second assay location such that reagents applied to said first assay location do not contact said second assay location; and
 - c) a lid in communication with said partition wherein a first hybridization chamber is formed at said first assay location and a second hybridization chamber is formed at said second assay location.
- 29. (Previously Presented) The composition of Claim 28, comprising a sealant configured to seal said lid to said substrate.
- 30. (Previously Presented) The composition of Claim 28, wherein said partition comprises a gasket.
- 31. (Previously Presented) The composition of Claim 30, wherein said partition comprises rubber or silicon.
- 32. (Previously Presented) The composition of Claim 30, wherein said gasket is adapted to fit within an indentation or channel on the substrate.
